

The East Middlesex Mosquito Control Project is planning to use truck mounted aerosol sprayers in Reading on Thursday, June 11th between dusk and 11:30 PM. Spraying is scheduled for neighborhoods that are located in the vicinity of John St., Eaton St., Salem St., Pearl St., Libby St., Charles St., Dana Rd., Rustic Lane and Haverhill St. If spraying is postponed, it will be re-scheduled for Monday, June 15th.

The Project uses a spray formulation containing the pesticide, sumithrin, to control mosquitoes. Sumithrin is a synthetic pyrethroid that is classified as a slightly toxic pesticide by the EPA. Mosquito control applications of sumithrin do not pose a significant risk to people or their pets due to the low toxicity of sumithrin and the small amount used to control mosquitoes. As with any pesticide, people should minimize exposure. If residents see a spray truck approaching, they are advised to go indoors for a couple of minutes while the spray dissipates. Residents are also advised to close windows facing the street. Beekeepers do not need to take any special precautions since spraying begins after dusk.

Information on the spray schedule is available via a recorded message at 781-893-5759 and at the Project web site at <https://sudbury.ma.us/emmcp/> Questions related to spraying or questions on mosquitoes can be answered by calling the East Middlesex Mosquito Control Project at 781- 899-5730.
